Team 5 Game Design Document

Jaime Avancena, Grace Hundermark, Sebastian Lanza Pineda, Timera Walters

Game Description

This game is a 2d platformer with the main mechanic/ feature being a grappling hook. The grappling hook is used to help the player traverse the game. (The game will have holes/ obstacles making the grappling hook necessary to use.)

It was planned to be –

- Strategic.
- Understandable
- Fun
- Simplistic
- Main mechanic - Grappling Hook

Controls

Use WASD for standard movement. E is for swinging (Hold to swing. Let go to stop.)

Goal

The player must use the grappling hook to travel upwards and make it to the top. If they fall, they will not die but they must repeat the process. There are no respawn points.

Objective Statement

This game should turn something that is inherently complex, to something that is simple and manageable while also being fun and strategic.

Design Rationale

This prototype was meant to be experimental.

Resources

Sebastian wrote all the code he gave on his won.

Jaime used the YouTube videos linked below.

For the level and character, Grace provided a Medieval Warrior pack, and a nature pixel art base asset from the unity assets store. She also provided another 2-platform asset, but it was scrapped.

Timera provided a grappling hook asset from the unity store, but it was scrapped.
